

Postdoctoral Researcher Opening in the Nanoprobe Laboratory for Bio- & Nanotechnology and Biomimetics (NLB²) at the Ohio State University

A postdoctoral researcher positions are available in the general area of Bio- & Nanotechnology and Biomimetics with an emphasis on AFM characterization and nanomechanical characterization and/or micro/nanofabrication. The projects require interest in hands-on-work and some electro-mechanical skills. There may also be a position available for someone in adhesion/contact modeling. Good written and communication skills are required. It is much easier to get work visa for people already in the US, therefore, preference will be given to anyone currently residing in the US. Also preference will be given to those just finishing PhD degree.

For further details on the NLB² Lab, please visit:
